Hello everyone,

My name is Shrihari Kulkarni, and I recently completed the Data Analyst project provided by ZeTheta.

For this project, I worked on developing a comprehensive Power BI dashboard to analyze a securitisation portfolio. During the project, I explored data cleaning, data modeling, DAX measures, and interactive dashboard design. I created multiple report pages covering portfolio analysis, delinquency analysis, vintage analysis, loss analysis, IFRS 9 risk analysis, and an investor report.

This project helped me understand how financial data can be transformed into meaningful business insights. I also realized that solving real-world problems requires not only technical knowledge but also patience, research, and continuous learning. Whenever I encountered challenges, I worked through them by exploring different approaches and improving the dashboard step by step.

Overall, this was a valuable learning experience that strengthened my Power BI, data visualization, and analytical skills. I appreciate the opportunity provided by ZeTheta and look forward to applying these skills in future internships and industry projects.

Thank you.
